

GVM FINAL AUTHENTICATED SCAN - UBUNTU

Task: ubuntu auth 2

Host: 192.168.100.131

Scan window: 2026-09-28 09:45:58-09:51:59 UTC

Authentication method: SSH

Authentication status: Success

Final result

Critical: 0

High: 0

Medium: 0

Low: 0

Displayed findings: 0

Baseline issues remediated

TCP timestamps

Weak SSH MAC algorithms

ICMP timestamp replies

Validation

TCP timestamps were disabled and persisted through system configuration.

Weak UMAC-64 SSH MAC variants were removed; SHA-2 HMAC/ETM algorithms remained.

ICMP timestamp requests stopped receiving replies after the firewall rule.
